

Message Directory App

Student Name: Abdelrahman Eldelngaty

Course: Mobile Programming

Exercise 3: React Native Messages Directory

Project Description

This project is a React Native application developed using Expo and TypeScript.

The application displays a list of important directories. When the user selects a directory, the application navigates to a new screen and displays the messages associated with that directory.

The purpose of this project is to demonstrate navigation between screens, data organization, and user interaction in a React Native application.

Directories Included

- Family
- Friends
- Work
- University
- Travel

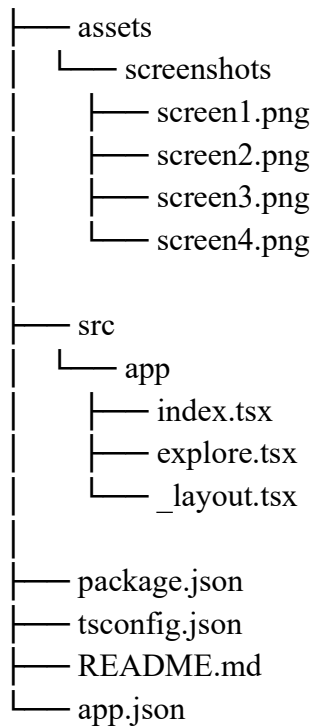

Each directory contains its own set of messages.

Technologies Used

- React Native
- Expo
- TypeScript
- Expo Router

Project Structure

message_directory_app

Features

- Display a list of directories.
- Navigate between screens.
- Show different messages for each directory.
- Simple and clean user interface.
- Implemented using TypeScript.

How to Configure and Run the Project

Step 1: Install Node.js

Download and install Node.js from:

<https://nodejs.org>

Step 2: Install Dependencies

Open a terminal inside the project folder and run:

```
npm install
```

Step 3: Start the Application

Run:

```
npx expo start
```

Step 4: Open the Application

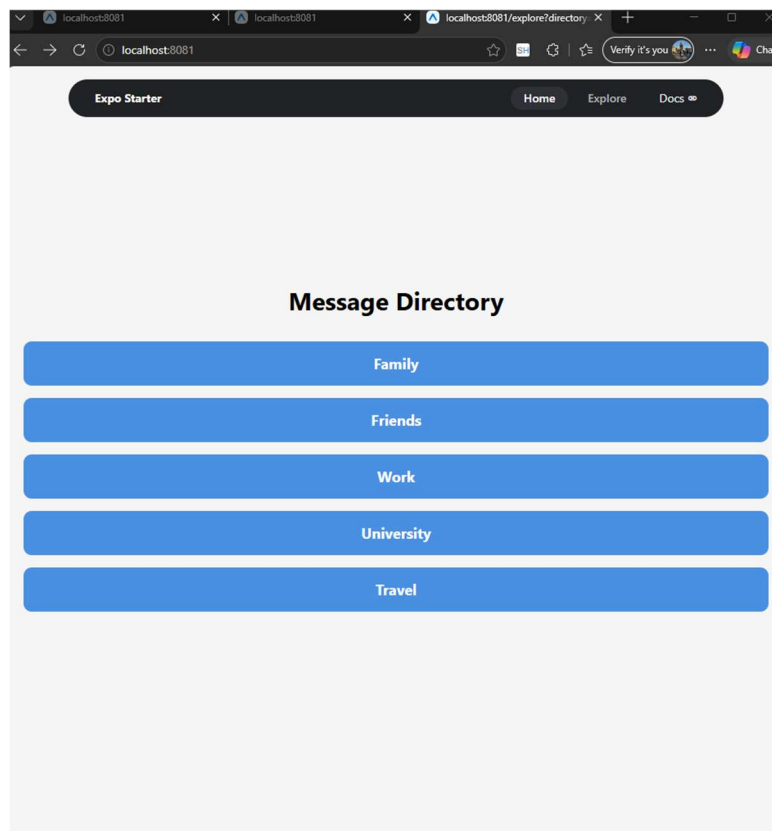

Open the following URL in your browser:

<http://localhost:8081>

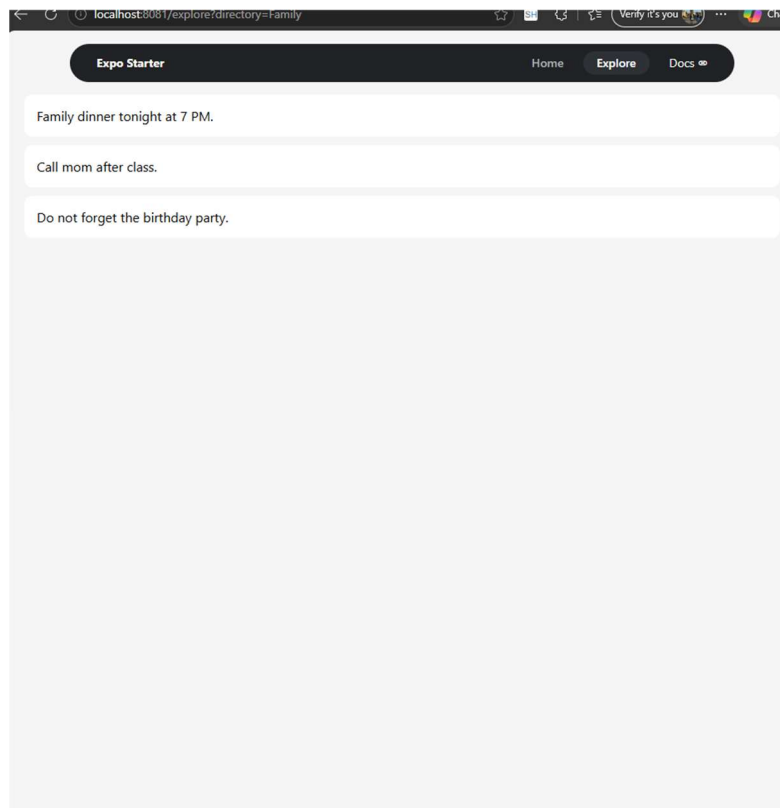

Or scan the QR code using Expo Go.

Family Directory

Work Directory

University Directory

Conclusion

This project successfully implements a React Native message directory application using Expo and TypeScript. The application demonstrates navigation, directory management, and message display functionality while maintaining a clean and user-friendly interface.
